

## Educational Technology at Rangeview Creating QR Codes

Level 4B have been busy writing stories using the online storybook creator, Storybird. After writing their imaginative stories and using the artwork from Storybird to illustrate their stories, they were ready to publish their work for others to read. However, the problem was, how do they get others to read their online storybooks? How do readers know where to find their books in the massive world of cyberspace?

The solution was to create a QR code for the URL of their online storybook. They then imported their QR code into PicCollage and created an advertisement using persuasive words and hyperbole to encourage readers to read their book by scanning the QR code.

To scan the QR codes you need a QR Reader on your smartphone, iPod or iPad or other tablet device.
